Education

B.Tech, Computer Science Engineering
Amity University Patna

Aug 2022 – Jun 2026
CGPA: 9/10

Experience

AI Intern

Jan 2026 – Present

C-DAC Patna (MeitY, Govt. of India)

- Architected an MCP-based natural language querying system across RAG, MongoDB, and SQL databases using “deepseek-coder:6.7b” for SQL & MongoDB query generation and “mistral:latest” for generating natural language responses from retrieved outputs.
- Scraped and processed 175+ Python FAQ pages using BeautifulSoup, and RAG pipeline with Sentence Transformers and FAISS for semantic search and contextual question answering.
- Developed a low-latency real-time speech-to-text system using Vosk and Qwen, enabling accurate transcription for Hindi, English, and Hinglish live streams.
- Implemented a multilingual RAG system using Elasticsearch, “multilingual-e5-large” embeddings, and “llama3.1:8b” for contextual multilingual question answering.

AI Developer

Apr 2025 – Jul 2025

MDev Solutions

- Automated sales forecasting with n8n pipelines and API-based data extraction; applied Meta’s Prophet time-series model in Google Colab to achieve 90%+ accuracy for 12-month demand prediction.
- Constructed an AI-driven construction image analysis pipeline with Telegram Bot, n8n, and AI agents; enabled real-time Q&A, task planning, and report generation, which 100+ active users adopt.

Skills

- **Programming:** Python, Java
- **Data Analysis:** Excel, Pandas, NumPy, Matplotlib, Seaborn
- **AI/ML:** Scikit-learn, PyTorch, TensorFlow, LangChain, LangGraph, RAG, LLMs
- **Web Development:** HTML, CSS, React, Flask, FastAPI
- **Databases:** MongoDB, MySQL
- **Cloud & Tools:** GCP, Azure, GitHub, Postman, n8n, Hugging Face

Projects

FilesGPT – Personalised Platform for Unified Document Intelligence

GitHub

- Engineered a full-stack platform (Python, FastAPI, React, MongoDB) supporting intelligent querying across 4+ document formats (PDF, scanned PDF, images, URLs) with secure authentication and full CRUD operations.
- Designed OCR and text-processing pipelines (PyMuPDF, pytesseract, BeautifulSoup) to enhance data extraction accuracy across diverse document formats.
- Integrated a RAG pipeline (LangChain, Sentence Transformers, Pinecone, Mistral LLM), enabling semantic retrieval and contextually grounded AI responses.

GitaBot – Bhagavad Gita ChatBot

Visit | GitHub

- Developed a multilingual sentiment-aware chatbot using Flask, Groq API, and “llama-3.3-70b-versatile”, achieving 95% classification accuracy across 10+ languages.
- Integrated speech input and real-time translation features to improve accessibility and user interaction.

Real Estate Price Prediction

Visit | GitHub

- Built a house price prediction system using Scikit-learn Linear Regression, achieving 85% model accuracy.
- Deployed the model through an interactive web interface created with HTML, CSS, JavaScript, and FastAPI, enabling users to input property features and receive real-time price predictions.

Achievements

- **Amazon ML Summer School 2025:** Selected through a nationwide assessment; completed 40+ hours of ML training led by Amazon scientists.
- **Google Cloud Arcade Facilitator Program:** Achieved Advanced Milestone with 30+ points and earned 25+ Google Cloud skill badges.
- **LeetCode:** Solved 100+ DSA problems and earned multiple badges.
